

Joker.

The cards have been reshuffled.

We believe that the process of inventing a tool is never completed, so we took another close look at our spanners.

The result is a Joker range with even more problem solvers for the increased requirements in modern screwdriving applications.

Many users wish to have a universal screwdriving tool with the widest possible range of applications. It should be a single tool for multiple metric and imperial dimensions.

It should automatically adjust to the different screw sizes. It should be safe to grab without damaging anything and allow for a high working speed.

The Joker 6004 fulfills these wishes. The continuous and parallel jaws replace several single spanner dimensions. The required size is automatically and continuously set when attaching the tool to the hexagon bolt or screw.

The integrated lever mechanism securely clamps the hexagon screw or bolt between the jaws, which significantly reduces the risk of slipping or damage.

The ratchet function ensures fast and consistent screwdriving without removing the tool. Thanks to the corner-width rectangular prisms, a back-pivoting angle of only 30° can be realized.

The single-arm design in conjunction with the ratchet function and the corner-width prism make it possible to work even in confined spaces. The adjustable Joker 6004 is the universal screwdriving tool.

Joker 6004

① Automatically and continuously self-setting

With its automatically and continuously gripping parallel jaws the Joker spanner 6004 covers all dimensions in the respective field of application. The tool automatically finds the required size when placed on the bolt or screw, no setting required.

③ Ratchet mechanism for fast work

The ratchet function in the mouth sees to fast and consistent screwdriving without removing the tool.

② Gentle to the screw

The parallel smooth jaws of the Joker 6004 allow surface pressure and can thus prevent rounding of the bolt or screw head, which can occur during power transmission on corners.

④ Low back-pivoting angle

Thanks to the corner-width rectangular prisms, a back-pivoting angle of only 30° can be realized.

As the installation space becomes increasingly tight during screwdriving, it remains necessary that tools evolve to enable users to work successfully. Narrow spaces require additional placement points of the tool. Can spanners be modified so that the placement possibilities of the tool increase?

The combination of the 7.5° pivoted mouth and the double hexagon geometry doubles the placement points. A repeated 180° turn of the wrench around the longitudinal axis during screwdriving provides four placement possibilities, and bolts or screw heads can be "taken" every 15° .

The Joker 6003 with its smart mouth geometry significantly expands the range of uses in confined spaces. The Joker 6003 will automatically find the respective placement point after every turn.

The slim yet robust ring side is angled by 15° to the tool axis. The high-quality surface treatment achieves a high and long-lasting corrosion protection.

With Take it easy tool finder: colour coding by size.

1 For very tight spaces

The Joker 6003 ring spanner with its special mouth geometry - a mouth side pivoted by 7.5° and the double hexagon geometry - doubles the placement possibilities when repeatedly turning the wrench 180° around the longitudinal axis. Bolts and screw heads can be "taken" every 15°. The

Joker 6003 will automatically find the respective placement point after every turn.

3 "Take it easy" tool finder

"Take it easy" tool finder system - with profile and size colour-coding for quick and easy tool selection. Colour-coded system for hexagon drive screws (L-Keys, Zyklop bit sockets), external hex drive screws and nuts (Joker wrenches, Zyklop sockets and Zyklop bit sockets with holding function), and TORX® drive screws (L-Keys, Zyklop bit sockets).

2 For pivoting angles under 30°

Thanks to the mouth side pivoted by 7.5°, double hexagon geometry and an adjusted application method (placement - screwdriving - turning - replacement - screwdriving - turning, etc), even screwdriving challenges allowing a pivoting angle of less than 30° can be solved.

4 Angled ring side

The ring side is angled at 15° to the tool axis to prevent injury.

High quality, metric double open-end wrench: It has a holding function, thanks to the metal plate in the jaw, which reduces the risk of dropping nuts and bolts.

The replaceable metal plate in the jaw secures nuts and bolts with its extra hard teeth and reduces the danger of slipping. The integrated limit stop prevents any slipping downwards around the bolt head and allows higher torque to be applied. The double-hex geometry makes

for a positive connection with nuts or bolts and reduces the risk of slipping. A return angle of only 30° prevents any time consuming flipping of the wrench during fastening jobs. The specially forged geometry ensures high torque transfer and great strength.

The Joker double open-ended wrench is ideally suited for locking down nuts and bolts. "Take it easy" Tool Finder with colour coding according to sizes.

1 Holding function

The Joker's holding function means that nuts and bolts can be held in the jaw and easily positioned where they are needed. Fastening on to the thread can then be done quickly and safely, thanks to the innovative special stop-plate which holds the fastener. No more time-wasting searches

for dropped nuts and bolts! After applying and positioning the nut or bolt, fastening can begin immediately – no additional tools required.

3 Double-hex geometry

The Joker's clever double-hex geometry delivers a very positive connection with nuts or bolts – it's a perfect fit. And the exchangeable, hardened metal gripping plate in the Joker's mouth literally bites itself into the bolt, with its extremely hard tips. Both features combine to prevent slipping, even at higher torque.

2 Integrated limit-stop

Constant re-positioning of the wrench? Difficulty holding fasteners in confined spaces? Easing off to avoid any risks of injury or fastener damage? That was yesterday. Today, the Joker prevents slipping off of the fastener head with its integrated limit-stop – no longer is the thumb needed to act as a

depth stop. This makes applications much easier and allows significantly more force to be applied during fastening jobs.

4 Small return angle

Instead of 60°, the Joker only has a 30° return angle thanks to its unique double-hex design. Along with the Joker's straight neck, this means that flipping the wrench has become a thing of the past. With the Joker, you can now loosen and tighten nuts and bolts,

in situations where conventional tools fail. Particularly in confined spaces, where conventional open-jawed wrenches cannot be used. The combination of limit stop and small return angle enables effective work, even on screw pipe connections.
